

TrendAI Vision One™

Threat Intelligence

Power proactive defense with insights

Proactive cyber defense with expertly curated threat intelligence

In today's fast-evolving threat landscape, reactive security is no longer sufficient. To stay ahead of adversaries, security teams must adopt a proactive defense posture, one that anticipates likely attack scenarios and prepares accordingly. But how do you determine which threats are most relevant to your organization?

The answer lies in contextual, real-time threat intelligence tailored to your organization's unique profile: its industry, geography, and digital footprint. This intelligence helps identify who's most likely to target you, understand their tactics, and prioritize defenses where they matter most.

Don't wait to be surprised. Build a defense strategy that's informed, agile, and ready—before, during, and after an attack.

Unmatched intelligence

Curated insights

Actionable defense

Unmatched intelligence. Curated insights. Actionable defense.

TrendAI Vision One™ Threat Intelligence delivers deep insights into threat activity and attacker behavior, enabling your organization to detect and hunt for existing threats and proactively prevent future attacks. Leverage the power of more than 35 years of research, the world's largest zero-day vulnerability discovery program, TrendAI™ Zero Day Initiative™ (ZDI), and a global network of hundreds of millions of sensors. With our TrendAI Vision One™ industry-leading cybersecurity platform, you gain enriched intelligence curated by dedicated threat researchers. This includes in-depth APT and cybercriminal reports, enhanced by dedicated threat analysis and trusted law enforcement.

Enable your threat intelligence team and SOC analysts to investigate threats by actor, Common Vulnerabilities and Exposures (CVEs), and region while achieving advanced clarity, speed, and confidence in the face of advanced attacks.

KEY BENEFITS

- Anticipate and preempt threats before they strike
- Respond swiftly and effectively during an attack
- Analyze post-incident activity to strengthen defenses in the future

VOICE OF THE CUSTOMER

We can now make more informed decisions about resource allocation and risk management strategies to ensure that our security efforts are better aligned with business priorities and objectives

Fully Integrated with TrendAI Vision One™

Your security teams are given a deep understanding of emerging threats, threat actors, vulnerabilities, and indicators of compromise (IoCs). Optimize unparalleled intelligence to build and deploy a proactive security plan and gain insights far beyond endpoint threats for actionable context across email, server, cloud, and network layers with access to:

- **Emerging threats and threat actors:** Proactively identify and analyze new cyber threats and the entities behind them
- **Vulnerability intelligence:** Utilize a detailed analysis of known vulnerabilities—covering exploitation, impacted assets, and mitigations—to quickly identify and respond to trending, exploitable threats
- **Enriched contextual IoC intelligence:** Gain context-rich data about specific indicators of a cyber risk by region, industry, tactics, techniques, and procedures (TTPs), descriptions, malware families, and more
- **Threat hunting queries:** Proactively search for cyber threats within your environment, tailored to detect and investigate suspicious IoCs
- **TrendAI Companion™ with access to Threat Intelligence:** Enable users of all skill levels to leverage threat intelligence, understand insights, and take action
- **Exclusive advanced persistent threat (APT) and cybercriminal reports:** Leverage deep, strategic threat reports from a dedicated research team—exclusively available to Threat Intelligence customers—to support informed security planning decisions
- **TrendAI Vision One™ Threat Intelligence Feed:** Export IoCs with context into third-party threat intelligence platforms
- **Automated investigations:** Automate sweeping by combining malware analysis, malware search, and threat insights
- **Custom intelligence sweeping:** Automate the detection of threats by integrating custom intelligence feeds into TrendAI Vision One™
- **Open-source intelligence feeds:** Collect data gathered from publicly available sources to identify potential cybersecurity threats
- **Third-party log sweeping:** Import your logs, sweep them, and get rich context on the threats detected

TrendAI Vision One™ Threat Intelligence Feed

Powered by  **ZERO DAY
INITIATIVE**

As part of TrendAI Vision One™ Threat Intelligence, our Threat Intelligence Feed provides your team with a sophisticated, meticulously curated intel source. Harnessing extensive intelligence from TrendAI™ Research and the TrendAI™ Zero Day Initiative™ (ZDI)—the world's largest vendor-agnostic bug bounty program—your team can stay ahead of emerging cyber threats with a comprehensive repository of IoC reports. By integrating the feed into your existing security infrastructure, your organization can maintain a robust, adaptive security environment.

Gain threat context for each IoC, such as domains and common CVEs, and filter by country or industry to refine data relevant to your organization's needs. Access detailed threat reports for TTPs and malware families to boost your investigation and incident response capabilities.

Included IoCs

- IP addresses
- SHA-1 and SHA-2 hashes
- Domains
- URLs
- CVEs

Context included in each IoCs report

- Countries
- Industries
- TTPs
- Descriptions
- Malware families

Integration methods

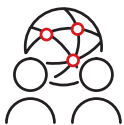

- API
- MISP
- TAXII
- OpenCTI

Threat Intelligence advantages

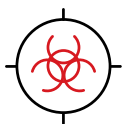

High-quality data

Our feed is based on proprietary data from TrendAI™ Research, meticulously curated by our researchers to ensure high quality with minimal duplications and false positives. This reduces your analysts' need for constant feed tuning, boosting their overall productivity.

Global reach

Unlike vendors limited to specific regions, our extensive global presence in more than 175 countries extends beyond the Americas and Europe, enabling your team to access differentiated threat intelligence. Multinational companies are provided with insights relevant to global operations to ensure comprehensive protection across diverse geographic sites. A global team of more than 450 internal researchers gives you comprehensive insights through regional threat analysis, crucial for protecting multinational operations.

The best threat research in the world

For over 35 years, we've built the strongest threat intelligence network in the industry, with more than 19,000 internal and external researchers contributing. Based on [Omdia Research: Quantifying the Public Vulnerability Market: 2025 Edition](#), we disclosed 1,070 vulnerabilities, and discovered 73% of publicly reported vulnerabilities in 2024 alone. Through our TrendAI™ Zero Day Initiative (ZDI)™, we protect customers three months before vendor patches come out.

TrendAI Vision One™ is the only AI-powered enterprise cybersecurity platform that centralizes cyber risk exposure management, security operations, and robust layered protection to help you predict and prevent threats, accelerating proactive security outcomes.

About TrendAI™

TrendAI™, a business unit of Trend Micro™ and global AI security leader, makes the world safer for digital information exchange across enterprises, governments, and organizations. Powered by security expertise and innovation, TrendAI™ leverages artificial intelligence to protect over 500,000 enterprises and millions of individuals across AI, cloud, networks, endpoints, and devices. AI Fearlessly.
