

TREND VISION ONE™ CYBER RISK EXPOSURE MANAGEMENT

Vulnerability Management

Security teams are racing to stay ahead of adversaries, but traditional vulnerability management struggles to keep pace with the complexity of modern attack surfaces. Legacy tools and point solutions create operational silos and overwhelming volumes of vulnerabilities with little context for prioritization. Organizations need an intelligent, risk-driven approach to stay ahead of attackers and protect what matters most.

Trend Vision One™ is powered by AI and world-renowned vulnerability research, giving security teams the insight they need to act. With **73% of global vulnerabilities in 2024** disclosed exclusively by the **Trend Zero Day initiative™ (Trend ZDI)**, you'll gain pre-disclosed insights and protection 90 to 120 days before patches are available to the public. This provides organizations with an unparalleled advantage, allowing you to reduce exposure risk and outpace adversaries.

Redefining risk-based vulnerability management

Continuously monitor managed devices

- Agent-based scans directly assess endpoints and applications by deploying lightweight agents on Windows, macOS, and Linux systems

Identify and secure exposures across your network

- Agentless network scans provide coverage for numerous network infrastructure vendors including Cisco, Fortinet, Palo Alto Networks™, Check Point Software Technologies, Juniper, HP, Arista Networks, SonicWall, Huawei, and Dell
- Use discovery scans to map your network and uncover unknown or unmanaged assets
- Perform deep risk assessments via vulnerability scans by authenticating network devices using valid credentials
- Complete external attack surface scans to target internet-exposed assets through frequent, on-demand scanning

Uncover vulnerabilities and misconfigurations in your cloud environment

- Agentless scanning detects vulnerabilities in your cloud environment including virtual machines, containers, serverless functions and storage resources
- Ensure ongoing visibility and control across dynamic, multi-cloud environments

Prioritize vulnerabilities with unmatched intelligence

- Using our context-aware common vulnerabilities and exposures (CVE) impact score, focus on exposures that pose the greatest real-world risk in your environment
- Leverage aggregated data from authoritative external sourcing, including the National Vulnerability Database (NVD), Cybersecurity and Infrastructure Security Agency (CISA), and MITRE to build a comprehensive profile for each CVE
- Correlate external intelligence with real-time telemetry from your environment including exploit attempts, asset criticality, the number of affected assets, and the availability of intrusion prevention rules for virtual patching

Accelerate remediation

- Instantly block exploit attempts with intrusion prevention rules, providing immediate protection for vulnerable systems
- Speed up remediation with automation and guided workflows

Streamline exposure management

- Get a holistic view of risk with a solution that extends beyond CVEs for smarter prioritization and mitigation
- Leverage unified dashboards and integrated workflows to remove silos, reduce complexity, and increase security team efficiency

Vulnerability management is part of the powerful cyber risk exposure management solution of Trend Vision One which combines external attack surface management (EASM), cyber asset attack surface management, attack path prediction, identity security, and more.

About Trend Micro

Trend Micro, a global cybersecurity leader, helps make the world safe for exchanging digital information between people, governments, and enterprises. Trend leverages security expertise and AI to protect more than 500,000 enterprises and millions of individuals across clouds, networks, endpoints, and devices worldwide. Proactive security starts here. TrendMicro.com
