

TrendAI™ TippingPoint™ Threat Protection System

Real-time detection, enforcement, and remediation without compromising security or performance

Cyber threats are constantly evolving, complex, and have potential to target newly discovered vulnerabilities or exploits. In other cases, threats take advantage of older vulnerabilities that you thought were long forgotten. Protecting your network assets and data means having full visibility into all network layers and resources. You need comprehensive, up-to-date security intelligence, complete risk awareness, and AI-powered automation to adapt to new threats, vulnerabilities, and everyday network changes.

As threats increasingly exploit the gap between vulnerability disclosure and remediation, organizations require inline network enforcement that can actively block them and lateral movement in real time, without relying on endpoint agents or delayed patch cycles. These vastly different threats require a multi-pronged approach to security. Outpace adversaries by implementing proactive security at the edge of and inside networks. Prevent malicious attacks from reaching critical resources and mitigate risk. Use comprehensive threat intelligence to protect your environment against known, unknown, and undisclosed vulnerabilities.

TrendAI™ TippingPoint™ Threat Protection System (TPS) delivers protection against known and undisclosed vulnerabilities with high accuracy. Gain industry-leading, high-performance coverage across different threat vectors with absolute flexibility, keeping you resilient against malware and phishing. Utilize deep packet inspection, threat reputation, URL reputation, and advanced malware analysis on a flow-by-flow basis to detect and prevent attacks on your network. Empower your teams to take a proactive approach to security, with comprehensive contextual awareness and deeper analysis of network traffic. Leverage TrendAI™ Digital Vaccine™ threat intelligence for the visibility and agility necessary to keep pace with today's dynamic, evolving enterprise and data center networks. Reduce your attack blast radius, prevent exploit-based ransomware, and maintain operational continuity across hybrid environments.

Key features

TrendAI™ TippingPoint™ threat protection extended to the cloud

TippingPoint TPS is a robust, inline security solution. Use it to extend your existing TippingPoint network protection to your hybrid cloud environments. Build a strong proactive defense with virtual patching, vulnerability shielding, exploit blocking, and protection against known and zero-day attacks with high accuracy. Implement industry-leading coverage across multiple threat vectors. Apply your TippingPoint security controls and policies to your cloud environments via your existing security management system (SMS).

On-box SSL inspection

Sophisticated and targeted attacks are increasingly using encryption to evade detection. TippingPoint TPS reduces your security blind spots created by encrypted traffic with on-box SSL inspection.

Performance scalability

Streamline data center consolidation and cloud environment proliferation with security solutions that scale with your needs. TippingPoint TPS delivers unprecedented security and performance for your high-capacity networks. This includes a scalable deployment model, featuring the industry's first 40 Gbps next-generation intrusion prevention system (NGIPS) in a 1U form factor with the ability to scale up to 120 Gbps aggregate in a 3U form factor.

Flexible licensing model

Easily scale performance and security requirements with a pay-as-you-grow approach and flexible licenses that can be reassigned across TippingPoint TPS deployments without changing your network infrastructure.

Proven leadership

Certified by NetSecOpen for powerful performance capabilities and a verified 100% block rate against the public and private CVE lists

Recognized as a Leader in The Forrester Wave™: Network Analysis and Visibility (NAV), Q4 2025

Brought to you by Informa Tech

Leader in global vulnerability research and discovery since 2007

[TrendAI™] Deep Discovery™ was a no brainer. It outperformed all competitors and was well-respected by Gartner. When [TrendAI™] purchased TippingPoint, we knew we had the best of both worlds.

Frank Bunton
Vice President and CISO,
MedImpact

Real-time machine learning

Security threats are constantly evolving, at times limiting the effectiveness of traditional signature and hash-based detection mechanisms. TippingPoint TPS uses statistical models, developed with machine learning techniques, so you can detect and mitigate threats in real time.

Enterprise vulnerability remediation (eVR)

Quickly remediate vulnerabilities by integrating third-party vulnerability assessments with the TippingPoint portfolio. Map common vulnerabilities and exposures (CVE) to Digital Vaccine filters and inform your response.

Advanced threat analysis

Extend protection from unknown threats through integration with TrendAI™ Deep Discovery™ Analyzer. TippingPoint TPS pre-filters known threats, forwards potential threats for automated sandbox analysis, and remediates in real time upon confirmation of malicious content. Potential threats are not only detected but validated and enforced inline, preventing malicious activity from progressing into your environment.

High availability

Ideal for inline deployment, TippingPoint TPS provides you with multiple fault-tolerant features, including hot swappable power supplies, watchdog timers to continuously monitor security and management engines, built-in inspection bypass, and zero-power high availability (ZPHA). Plus, provision TippingPoint TPS using redundant links in a transparent active-active or active-passive high availability (HA) mode. These capabilities allow TippingPoint TPS to operate inline at scale without introducing performance risk, even in mission-critical environments.

Integrated advanced threat prevention

TippingPoint TPS integrates with TrendAI™ Deep Discovery™ advanced threat detection offerings.

Asymmetric traffic inspection

Traffic asymmetry is prevalent in enterprise and data center networks. Overcome flow and routing asymmetry challenges by using TippingPoint TPS to inspect all types of traffic. This enables you to apply security policies seamlessly to ensure comprehensive protection.

Agility and flexibility

Achieve software-defined network protection by deploying an intrusion prevention system (IPS) as a service. TippingPoint TPS also protects virtualized applications, such as VMware and KVM, within your virtualized infrastructure.

AI-powered threat intelligence

Trend™ Research provides comprehensive threat insights and security filters that cover an entire vulnerability. Uplevel protection against all potential attack permutations, not just specific exploits. In addition, get pre-disclosed insights and protection from the TrendAI™ Zero Day Initiative™ (ZDI), 90 to 120 days before patches are available to the public. As the world's leading bug bounty program, TrendAI™ ZDI exclusively disclosed 73% of global vulnerabilities in 2024, helping organizations stay ahead of adversaries.

Virtual patching

Reduce risk when systems cannot be immediately patched. Block exploits attempts at the network layer to close exposure gaps between vulnerability disclosure and remediation. Vulnerability-based filters provide pre-emptive protection against known exploits, helping you maintain business continuity while strengthening your patch management strategy.

Support for a broad set of traffic types

TippingPoint TPS supports a wide variety of traffic types and protocols. It provides uncompromising IPv4 and IPv6 simultaneous payload inspection, along with support for related tunneling variants including 4in6, 6in4, and 6in6. TippingPoint TPS also supports inspection of IPv4 and IPv6 traffic with VLAN and MPLS tags, mobile IPv4 traffic, GRE and GTP (GPRS tunneling), and jumbo frames. This breadth of coverage gives your IT and security administrators the flexibility to deploy protection wherever it is needed.

Centralized management

Our TrendAI™ TippingPoint™ Security Management System (SMS) delivers a unified policy and element management graphical user interface. This provides you with a single mechanism for monitoring operational information, editing network security policies, configuring elements, and deploying network security policy across your entire infrastructure, whether physical or virtual.

Key benefits

Implement pre-emptive, inline threat prevention

Inspect and block all directions of traffic—inbound, outbound, and lateral—in real time, protecting against known, unknown, and undisclosed vulnerabilities.

Inform real-time enforcement with threat insights

Get complete network visibility to measure and drive threat prioritization. This ensures potential threats are not only detected but validated and enforced inline, preventing malicious activity from progressing into the environment.

Reduce blast radius and downtime

Protect your network from the edge to the data center and cloud. Perform high-speed, inline deep packet traffic inspection and coverage additional security services.

Simplify security operations

Leverage flexible deployment options that are easy to set up and manage through a centralized management interface. Get immediate and ongoing threat protection with out-of-box recommended settings.

TippingPoint TPS technical specifications

Features	1100TX (TPNN0321)	5500TX (TPNN0322)	8200TX (TPNN0090)	8400TX (TPNN0091)
Supported IPS inspection throughput	250/500 Mbps/1 Gbps	1/2/3/5 Gbps	3/5/10/15/20/30/40 Gbps	
SSL inspection(2K keys with ECDHE-RSA-AES256-GCM-SHA384)	Not available	Up to 3.5 Gbps (capped by IPS inspection throughput)	Up to 8 Gbps (capped by IPS inspection throughput)	
New SSL connections per second	Not available	3,500	7,000	
SSL concurrent connections	Not available	80,000	100,000	
Latency	<100 μs	<60 μs	<40 μs	
Concurrent sessions	15,000,000	30,000,000	120,000,000	
New connections per second	100,000	400,000	650,000	
(Mean time between failures (MTBF))	93,177 hours at 25°C ambient	75,660 hours at 25°C ambient	88,706 hours at 25°C ambient	
Form factor	1RU			2RU
Weight	14.5 lbs (6.58 Kg)	17.5 lbs (7.94 Kg)	32 lbs (max including IOMs) 29 lbs (w/ blank IOMs)	50 lbs (max. including IOMs) 41.5 lbs (w/ blank IOMs)
Dimensions (W x D x H)	18.54" (W) x 17.90" (D) x 1.73" (H) 47.09 cm x 45.47 cm x 4.40 cm		16.78" (W) x 17.3" (D) x 1.72" (H) 42.62 cm x 45.00 cm x 4.40 cm	16.77" (W) x 18.70" (D) x 3.46" (H) 42.60 cm x 47.50 cm x 8.80 cm
Management ports	One out-of-band 10/100/1000 RJ-45, one RJ-45 serial			
Management interface	SMS, local web console, command-line, SNMPv2c, SNMPv3 (TippingPoint management information base available)			
Network I/O module slots	1	2	2	4
Network connectivity	Mix of modules listed below			
On-box storage	8 GB internal CFAST / 8 GB external 1.8" SSD	32 GB internal CFAST / 32 GB external 1.8" SSD	32 GB hot-swappable 1.8" SSD module	
Voltage	100-240 VAC, 50-60 Hz		100 to 240 VAC/-40 to -60 VDC	
Current (max. fused power)	4-2 A		12/6 amps AC, 24/16 amps DC	
Max. power consumption	130 W (443 BTU/hour)	220W (751 BTU/hour)	550 W (1,875 BTU/hour)	750 W (2,557BTU/hour)
Power supply	Single field replaceable	Dual/ redundant hot-swappable/field replaceable	Dual/redundant hot-swappable	
Operating temperature	32°F to 104°F (0°C to 40°C)			
Operating relative humidity	5% to 95% non-condensing			
Non-operating/storage temperature	-4°F to 158°F (-20°C to 70°C)			
Non-operating/storage relative humidity	5% to 95% non-condensing			
Altitude	Up to 10,000 feet above MSL (3,048 m)			
Safety	UL 60950-1, IEC 60950-1EN 60950-1, CSA 22.2 60950-1RoHS compliance			
EMC	Class A, FCC, VCCI, KC EN55022, CISPR 22, EN55024 CISPR 24, EN61000-3-2 EN61000-3-3, CE marking			

Cloud network IPS technical specifications

Features	Virtual TippingPoint TPS standard	Virtual TippingPoint TPS performance
Supported IPS inspection throughput	250 Mbps/500 Mbps/1 Gbps (VMware, KVM), 2 Gbps (VMware)	
SSL inspection	Not available	1 Gbps (VMware), 900 Mbps (KVM)
SSL connections per second	Not available	1,500 (VMware), 900 (KVM)
SSL concurrent connections	Not available	6,500 (VMware, KVM)
Number of logical cores	2 or 3	4
Memory	8 GB	16 GB
Disk space	16 GB	
IPS connections per second	120,000 (VMware), 60,000 (KVM)	
IPS concurrent connections	10,000,000 (VMware), 1,000,000 (KVM)	
Virtual platform support	VMWare ESXi 5.5, 6.0, 6.5, 6.7(NSX is not required for transparent inspection and enforcement) and KVM - Red Hat Enterprise Linux 6, 7	
Network drivers	VMware- VMNet3 KVM- virtIO	
Number of network segments	1	
Number of virtual segments	No limit	
Dedicated management vNIC	Yes
