

TRENDAI™

Deep Discovery™ Analyzer

Enhanced protection against targeted attacks

Empowering your SOC team with custom sandboxing and advanced analytical capabilities

Many of today's cyber threats are customized to evade conventional security and stay hidden, stealing or encrypting sensitive data until ransom demands are met. Detecting these kinds of threats requires advanced technology and a proactive security strategy.

TrendAI™ Deep Discovery™ Analyzer supports both. Extend its sandboxing to other TrendAI™ solutions and have suspicious objects sent to Deep Discovery Analyzer via multiple detection methods, boosting the value of your existing investments in TrendAI™ and third-party solutions.

Integrate seamlessly and secure proactively with TrendAI Vision One™

Integrate Deep Discovery Analyzer with TrendAI Vision One™ Sandbox Analysis so that suspicious samples detected by TrendAI Vision One™ can be submitted for analysis, allowing your SOC team to use Deep Discovery Analyzer instead of cloud-based sandbox analysis.

Go further with additional TrendAI™ Deep Discovery™ options

Deep Discovery Analyzer is part of our Deep Discovery portfolio, delivering advanced threat protection where it matters most to your organization, including network, email, endpoint, and existing security solutions.

TrendAI™ Deep Discovery™ Inspector enables 360-degree detection of network-based targeted attacks and advanced threats. Deployable as either a virtual or hardware appliance, its specialized detection engines and custom sandbox analysis identifies advanced and unknown malware, ransomware, zero-day exploits, C&C communications, lateral movement, and evasive attacker activities that are invisible to standard security defenses.

TrendAI™ Deep Discovery™ Email Inspector gives you advanced malware detection including sandboxing for email and can be configured to block email-based delivery of advanced malware.

Key benefits

Superior threat detection

- Proactively manage risk with insights from TrendAI Vision One™
- Go further than generic virtual environments
- Leverage flexible deployment options for centralized or decentralized analysis
- Get support for Microsoft Windows, macOS, and Linux operating systems

Tangible ROI

- Enhance existing investments with integrated threat intelligence and extra processing for high traffic
- Remove time-consuming manual analysis of suspicious files
- Protect against expensive ransomware remediation

Key capabilities

Customize and enhance your sandbox analysis

Leverage virtual images tuned to precisely match system configurations, drivers, installed applications, and language versions. Improve the detection rate of advanced threats designed to evade standard virtual images.

Deep Discovery Analyzer gives you a custom sandbox environment with safe, external access to identify and analyze multi-stage downloads, URLs, and command and control (C&C) activity while supporting manual or automated file and URL submission.

Expand your flexibility

Deploy Deep Discovery Analyzer as a standalone sandbox or alongside a fuller TrendAI™ Deep Discovery™ deployment for additional capacity. Scale to support up to 60 sandboxes in a single appliance, with the option to cluster multiple appliances for high availability or configure for hot or cold backup scenarios.

Leverage advanced detection methods

Utilize static, heuristic, and behavior analysis, web reputation, and file reputation for quick threat discovery. Detect multi-stage malicious files, outbound connections, and repeated C&C from suspicious files.

Stay ahead of ransomware threats

Protect against script emulation, zero-day exploits, and targeted and password-protected malware commonly associated with ransomware. Information on known threats lets you discover ransomware through pattern and reputation-based analysis, while customizing your sandbox makes it possible to detect mass file modifications, encryption behavior, and adjustments to backup and restore settings.

Utilize advanced detection methods

Broad file analysis: Examine a wide range of file types, including Windows executables, Microsoft 365 documents, PDFs, web content, and compressed files via multiple detection engines and sandboxing

Document exploit detection: Discover malware and exploits delivered in common document formats through specialized detection and sandboxing

URL analysis: Perform sandbox analysis of URLs contained in emails or manually submitted samples

Web services API and manual submission: Enable any solution or malware analyst to submit suspicious samples; share new indicators of compromise (IoC) detection intelligence automatically with TrendAI™ and third-party solutions

“A lot of good things happen with a multilayered security infrastructure, from greater efficiency and scalability to peace of mind that our system and data are protected.”

Frank Bunton
Vice President and CISO,
MedImpact

Proactive security starts here

TrendAI Vision One™ empowers your SOC team with real-time risk insights to visualize, prioritize, and mitigate threats with speed and precision. Take control of your cyber risk and leave adversaries with no place to hide.

- **Protect:** Assess potential vulnerabilities and proactively protect endpoints, servers, and applications
- **Detect:** Identify advanced malware, behavior, and communications invisible to standard defenses
- **Respond:** Respond rapidly with shared threat intelligence and delivery of real-time updates to TrendAI™ and third-party security layers using YARA and STIX
- **Visibility and control:** Centralize visibility across your network and systems to analyze and assess the impact of threats

Industry leadership

Named a Leader in the Forrester Wave™: Network Analysis and Visibility Solutions, Q4 2025

Deep Discovery Analyzer Hardware Model 1300 Specifications

Capacity	40,000 samples per day*
Supported file types	Windows: Bat, cell, chm, class, cmd, com, csv, dll, doc, docx, exe, gul, hta, htm, html, hwp, iqy, jar, js, jse, jtd, lnk, mht, mhtml, mov, msi, odp, ods, odt, pdf, ppt, pptx, ps1, pub, rtf, shtm, shtml, slk, svg, swf, url, vbe, vbs, wsf, xht, xhtml, xls, xlsx, xml Linux: elf,sh Mac: class,dmg,jar,macho,pkg
Supported operating systems	Windows XP, 7, 8/8.1, 10, 11 - Windows Server 2025,2003, 2008, 2012, 2016, 2019, 2022 -macOS - CentOS 7.8, RHEL 7,9 RHEL 8.3, Ubuntu 20.04.6
Form factor	2U rackmount, 48.2 cm (18.98")
Weight	28.82 kg (63.53 lb)
Dimensions	Width 48.2 cm (18.98") x Depth 75.13 cm ((29.58") x Height 8.68 cm (3.42")
Management ports	10/100/1,000 BASE-T RJ45 port x 1
Data ports	10/100/1,000 Base-T RJ45 port x 3
AC input voltage	100 - 240 VAC
AC input current	12A - 6.3A
Hard drives	4 TB 3.5-inch SATA x 2
RAID configuration	RAID 1
Power supply	1,100W redundant
Heat	4,125 BTU/hr. (max.)
Frequency	50/60 HZ
Operating temperature	41-104 °F (5 - 40 °C)
Hardware warranty	Three years; refer to Deep Discover product family hardware warranty validity

*Performance may vary depending on usage and settings.
